

Nurse Practitioner with a vision, keen to join our amazing team working to change the face of healthcare

30-40 hours per week

We are looking for someone to help us shape the future of community-based practice.

- The ideal candidate for this role may be someone with an interest in either acute care or chronic disease, and/or someone wanting to develop their knowledge and skills in these areas.

We are a grass roots, community supported practice and partly owned by a Community based Charitable Trust.

We are a Teal organisation disrupting stereotypes of typical general practice teams.

- We work in mixed clinical teams, with nurse trained practitioners, physician trained practitioners, physiotherapists, psychologists, and clinical pharmacists all playing a part in delivering the best possible healthcare.
- We need a unique and lateral thinker who is frustrated by work in a conventional health care setting.

We embrace this diversity so that we can share our complex cases and not isolate ourselves.

This is a place where someone is excited by the opportunity to work as a team and think and act differently; and contribute to changing health outcomes by delivering care in a novel and evidence-based way that is ever evolving.

- We are a place where your energy and passion can make a real difference to the lives of people, and at the same time improve the standard of health in the community, locally and nationally.

We also carry out research around the drivers of poor health and interventions that will improve health.

- We have a project with Otago University and the Health Research Council (HRC) looking at transdisciplinary care in community practice.
- We also have a leading-edge programme underway to develop new technologies to help us with patient diagnostics and data use integrated into patient management systems. This programme will also look at the convergence of many disciplines and how they can work together to create better health for our communities.

Palmerston North has affordable homes, great schools, walks to die for, and the most cafes per capita in the country. It is close to ski fields, beaches, and wineries of the Wairarapa and Hawkes Bay.
